1. Lecture Schedule – UG, PG , PhD - Theory / Practical Schedule – Approved by BoS – Subject wise

Lecture Schedule

UNIT - 1

Title of Unit: Principles of Animal Nutrition and Feed Technology

Lect.	Topics
No.	•
1	History of Animal Nutrition.
2	Importance of nutrients in animal production and health.
3	Composition of animal body and plants
4	Nutritional terms and their definitions
5	Nutritional aspects of carbohydrates, Protein, Fat
6	Role and requirements of water, metabolic water
7	General importance of minerals in animal health and production, Classification
	of minerals.
8	Major minerals, Importance of Calcium and Phosphorus in animal health and
	production, their requirement and supplementation in feed.
9	Importance of Sodium, Potassium, Chlorine, Sulphur and Magnesium in animal
	health and production, their requirement and supplementation in feed.
10	Trace minerals, Importance of Iron, Copper, Cobalt and Selenium in animal
	health and production, their requirement and supplementation in feed.
11	Importance of Iodine, Zinc, Manganese, Fluorine and Molybdenum in animal
	health and production, their requirement and supplementation in feed.
12	General importance of vitamins in animal health and production, Classification
	of vitamins.
13	Fat soluble vitamins, Importance of Vitamin A and D in animal health and
	production, their requirement and supplementation in feed.
14	Importance of Vitamin E and K in animal health and production, their
	requirement and supplementation in feed.
15	Importance of Thiamine, Riboflavin, Niacin and Pantothenic acid in animal
	health and production, their requirement and supplementation in feed.
16	Importance of Biotin, Pyridoxine, Folic acid, Cyanocobalamin and Choline and
	Vit. C in animal health and production, their requirement and supplementation in
	feed.
17	Common feeds and fodders and its classification, Various types of concentrates
	and roughages, its importance for livestock health and production and
	availability.
18	Measures of food energy and their applications, gross energy, digestible energy,
	metabolizable energy and net energy
19	Total digestible nutrients, Starch equivalent
20	Food units and physiological fuel value.

21	Direct calorimetry.
22	Indirect calorimetry, Carbon nitrogen balance studies.
23	Protein evaluation of feeds- Measures of protein quality in non-ruminants,
	Biological value of protein, protein efficiency ratio, protein equivalent.
24	Calorie protein ration and nutritive ratio.
25	Measures of protein quality in ruminants- Digestible crude protein, RDP and
	UDP, metabolizable protein
26	Introduction to feed technology- feed industry. Processing of concentrates and
	roughages.
27	Various physical methods of feed processing for improving the nutritive value of
	inferior quality roughages.
28	Various chemical and biological methods of feed processing for improving the
	nutritive value of inferior quality roughages
29	Preparation, storage and conservation of livestock feed through silage and its use
	in livestock feeding.
30	Preparation, Storage and conservation of livestock feed trough hay and its use in
	livestock feeding.
31	Harmful natural constituents and common adulterants in Roughages
32	Harmful natural constituents and common adulterants in Concentrates
33	Feed additives in the rations of livestock and their uses.
34	Feed additives in the rations of poultry and their uses.

UNIT - 2 Title of Unit: Applied Ruminant Nutrition- I

Lect.	Topics
No.	•
35	Scientific feeding & its Importance.
36	Feeding experiments, different methods of feeding experiments.
37	Feeding experiments, different methods of feeding experiments.
38	Digestion & metabolism trials, norms adopted in digestion trial.
39	Measurement of digestibility by conventional methods.
40	Indicator method of determining digestibility.
41	Determining pasture consumption & its digestibility.
42	Factors affecting digestibility of feed.
43	Feeding standards and its classification.
44	Uses, significance, merits and demerits of various feeding standards with
	reference to ruminants.
45	Balanced ration & its characteristics.

UNIT -3 Title of Unit: Applied Ruminant Nutrition- II

Lect. No.	Topics
46	Energy and protein requirement of livestock for maintenance.
47	Energy and protein requirement of livestock for production.
48	Methods adopted for arriving energy requirement for maintenance.
49	Methods adopted for arriving protein requirement for maintenance.
50	Methods adopted for arriving energy & protein requirements for production in terms of growth and reproduction.
51	Methods adopted for arriving energy & protein requirements for production in terms of milk and meat.
52	Methods adopted for arriving energy & protein requirements for production in terms of wool and draft purpose.
53	General principles of computation of rations.
54	Formulation of ration for dairy cattle.
55	Formulation of ration for lactating buffaloes.
56	Feeding of dairy cattle & buffalo- Calf stage (up to weaning)
57	Feeding of dairy cattle & buffalo- Growth stage and adult animal
58	Feeding of dairy cattle & buffalo- pregnant, dry and lactating animals
59	Feeding of dairy cattle & buffalo- breeding bulls & working animals.
60	Formulation of ration and feeding of sheep & goat- kids and lambs
61	Feeding of sheep & goat- pregnant, lactating doe & ewes
62	Feeding of sheep & goat- meat and wool production
63	Feeding of high yielding animals and role of bypass nutrients.
64	Metabolic disorders and nutritional interventions.
65	Importance and utilization of NPN compounds for ruminants.

Lect.	Topics
No.	
66	Energy and protein requirement for maintenance and production for Poultry.
67	Energy and protein requirement for maintenance and production for Swine.
68	Energy and protein requirement for maintenance and production for Equine.
69	Methods adopted for arriving at energy and protein requirement for maintenance.
70	Methods adopted for arriving at energy and protein requirement for growth,
	reproduction, egg, meat and work
71	Feeding standards for non-ruminants and poultry.
72	Formulation of ration for poultry as per BIS and ICAR specifications.
73	Formulation of ration for swine as per BIS and ICAR specifications.
74	Formulation of ration for horse as per BIS and ICAR specifications
75	Feeding of swine- piglets, growers, pregnant sows, lactating sow, breeding boar
	and fattening animals (with conventional and un-conventional feeds).
76	Feeding of equine- foal, yearling and brood mare (with conventional and un-
	conventional feeds).
77	Feeding of equine- stallion and race horses (with conventional and un-conventional
	feeds).
78	Feeding of poultry- Broiler (with conventional and un-conventional feeds).
79	Feeding of poultry- Layer (with conventional and un-conventional feeds).
80	Feeding of duck, quail and turkey.
81	Nutrient requirement, feeding practices and diet formulation for mice and rat.
82	Nutrient requirement, feeding practices and diet formulation for rabbit.
83	Nutrient requirement, feeding practices and diet formulation for guinea pig.
84	Nutritional requirement and feeding of various breeds of dogs - pups, growing and,
	adult dogs, pregnant and lactating bitches.
85	Nutritional requirement and peculiarities of feeding cats.
86	Feeding of wild animals in captivity – Carnivores.
87	Feeding of wild animals in captivity – Herbivores.
88	Feeding of wild animals in captivity- Omnivores.
89	Feeding of wild birds in captivity
90	Metabolic disorders and nutritional interventions in non-ruminants.

UNIT -4 Title of Unit: Applied Non-ruminant Nutrition

Practical Schedule

UNIT - 1

Title of Unit: Principles of Animal Nutrition and Feed Technology

Prct.	Topics
No.	
1	General precautions while working in nutrition laboratories.
2	Familiarization of various feed stuff and fodders, Preparation and processing of samples for chemical analysis-herbage, silages, faeces and urine.
3	Preparation of solutions, Weende's system of analysis, Proximate principles in feed – general views and its main features.
4	Estimation of dry matter in feed samples.
5	Estimation of total ash in feed samples.
6	Estimation of acid insoluble ash in feed samples.
7	Estimation of crude protein in feed samples.
8	Estimation of ether extract in feed samples.
9	Estimation of crude fibre and calculation of nitrogen free extract in feed samples.
10	Estimation of calcium in feed samples.
11	Estimation of phosphorus in feed samples.
12	Demonstration of detergent method of forage analysis.
13	Qualitative detection of undesirable constituents and common adulterants of feed.

UNIT - 2 Title of Unit: Applied Ruminant Nutrition- I

Prct.	Topics
No.	
14	Determination of digestibility
15	Calculation of nutritive value in terms of DCP, TDN and NR (Nutritive ratio)
	and balance of nutrients.

UNIT -3 Title of Unit: Applied Ruminant Nutrition- II

Prct.	Topics
No.	Topics
16	Calculation of requirements of nutrients in terms of DCP, TDN & ME for maintenance, growth, meat, milk, wool, reproduction and draft purpose.
17	Formulation of ration for growing, dry and pregnant cattle and buffalo.
18	Formulation of ration for milk production for cattle and buffalo
19	Formulation of ration for feeding livestock during scarcity period.
20	Visit to animal farm and feed mill.

UNIT -4
Title of Unit: Applied Non-ruminant Nutrition

Prct.	Topics
No.	
21	Calculation of requirement of nutrient for growth, reproduction, egg and meat production.
22	Calculation of requirement of nutrient for growth, reproduction, egg and meat production.
23	Formulation of ration for Broilers and Layers (with conventional and unconventional feed ingredients).
24	Formulation of ration for swine- Creep ration, grower and finisher ration (with conventional and unconventional feed ingredients).
25	Principles of compounding and mixing of feeds.
26	Visit to farms.
27	Formulation of balanced diets for horses.
28	Formulation of balanced diets for dogs.
29	Formulation of balanced diets for cats.
30	Feeds and feeding schedule of zoo animals, Birds diet charts.

Lecture and Practical Schedule – Animal Nutrition

- I. Course Title : Nutritional Biochemistry
- II. Course Code : ANN 601
- III. Credit Hours : 1+0

Unit I (Unit I (6 Lectures)	
1	Classification of carbohydrates and functions of carbohydrates	
2	Monosaccharides, Disaccharides, Polysaccharides examples and significance	
3	Glycolysis, Kreb's cycle	
4	HMP shunt, Gluconeogenesis	
5	Digestion, absorption and metabolism of carbohydrates in ruminants	
6	Digestion, absorption and metabolism of carbohydrates in non-ruminants	
Unit I (Unit I (5 Lectures)	
7	Classification of lipids, Properties and biological significance of fats	
8	Digestion, absorption and metabolism of fats in ruminants	
9	Digestion, absorption and metabolism of fats in non-ruminants	
10	Biosynthesis of Fatty acids	
11	Cholesterol synthesis	
Unit III	(7 Lectures)	
12	Classification of amino acids, Properties and function of amino acids	
13	Digestion, absorption and metabolism of proteins and other nitrogenous compounds in ruminants	
14	Digestion, absorption and metabolism of proteins and other nitrogenous compounds non-ruminants	
15	Ammonia transport, urea cycle	
16	Biosynthesis of protein	
17	Significance of purines and pyrimidines	
18	Biological significance of nucleotides and nucleotides	

Suggested Reading (ANN-601)

• Cheeke PR and Dierenfeld E. 2010. *Comparative Animal Nutrition and Metabolism*. CAB International.

• D'Mello JPF. 2003. Amino Acids in Animal Nutrition, 2nd ed. CAB International.

• Leeson S and Summers JD. 2001. Scott's Nutrition of The Chicken, 4th ed. University Books.

• Maynard LA, Loosli JK, Hintz HF and Warner RG. 1987. Animal Nutrition. Tata McGraw-Hill.

• McDonald P, Edwards RA, Greenhalgh JFD, Morgan CA, Sinclair LA and Wilkinson RG. 2011. *Animal Nutrition*, 7th ed. Benjamin Cummings.

• Nelson DL and Cox MM. 2017. *Lehninger Principles of Biochemistry*, 7th ed. Macmillan Learning.

Course Title: Energy and Protein Nutrition

- I. Course Code : ANN 602
- II. Credit Hours : 2+0

	Unit I (10 Lectures)
1	Measures of feed energy
2	Total digestible nutrients, its calculations, advantages and limitations
3	Partitioning of feed energy, Gross & Digestible energy
4	Metabolizable energy & Net Energy
5	Energy balance,
6	Fasting catabolism.
7	Direct calorimetry
8	Indirect calorimetry
9	Efficiency of energy utilization.
10	Efficiency of protein utilization.
Uni	t II (14 Lectures)
11	Rumen degradable protein (RDP)
12	Rumen undegradable protein (UDP)
13	Protein fermentation kinetics.
14	Energetics of protein synthesis and Protein turnover.
15	Microbial protein synthesis and its significance
16	Microbial protein quantification
17	Protein quality determination in ruminants.
18	Protein quality determination in monogastrics
19	Utility of Biological value, its calculation, advantages and limitations.
20	Utility of Nutritive ratio, its calculation, advantages and limitations.
21	Supplementary value of amino acids.
22	NPN metabolism, urea fermentation potential (UFP)
23	Metabolizable protein
24	Amino acids imbalance, antagonism and toxicity.
Uni	t III (12 Lectures)
25	Feeding standards: comparative appraisal and limitations.
26	Determination of energy requirements.
27	Determination of protein requirements.
28	Nutrients metabolism with special reference to milk production.

- 29 Nutrients metabolism with special reference to meat production.
- 30 Nutrients metabolism with special reference to wool production.
- 31 Energy requirement for maintenance and growth in farm animals.
- 32 Energy requirement for pregnancy in farm animals.
- 33 Energy requirement for lactation in farm animals.
- 24 Protein requirement for maintenance and growth in farm animals.
- 35 Protein requirement for pregnancy in farm animals.
- 36 Protein requirement for lactation in farm animals.

Suggested Reading (ANN-602)

• Singh UB. 1987. Advanced Animal Nutrition for Developing Countries. Indo-Vision.

- I. Course Title : Minerals and Vitamin Nutrition and Feed Additives
- II. Course Code : ANN 603 III Credit Hours : 2+1

III. Creat Hours . 2+1		
Unit I (1	Unit I (14 Lectures)	
1	General role of minerals	
2	Factors affecting mineral requirements.	
3	Macro-minerals their, distribution, metabolism, physiological functions of calcium	
4	Macro-minerals their, distribution, metabolism, physiological functions of phosphorus	
5	Macro-minerals their, distribution, metabolism, physiological functions of magnesium	

6	Macro-minerals their, distribution, metabolism, physiological functions (Na, Cl, K, S)
7	Micro-minerals, their, distribution, metabolism, physiological functions
8	Micro-minerals, their, distribution, metabolism, physiological functions
9	Micro-minerals, their, distribution, metabolism, physiological functions
10	Deficiencies and excesses, sources and requirements of Macro minerals.
11	Deficiencies and excesses, sources and requirements of Micro minerals.
12	Critical minerals for non-ruminants
13	Critical minerals for ruminants.
14	Probable essential minerals.
Unit II	(7 Lectures)
15	Mineral interactions. Chelated minerals and concept of nano-minerals.
16	Bioavailability studies in minerals.
17	Impact of minerals on reproduction, fertility and immunity.
18	Soil-plant-animal-human relationship
19	Development of area-specific mineral mixture.
20	Toxic minerals; their role in health and production of farm animals.
21	Newly recognized trace minerals.
	(11 Lectures)
22	Definition, history, classification, chemistry and functions of water soluble vitamins
23	Requirements, Deficiencies and excesses of water soluble vitamins
24	Definition, history, classification, chemistry and functions of fat soluble vitamins
25	Requirements, Deficiencies and excesses of fat soluble vitamins
26	Role of vitamins in energy metabolism
27	Relationship of vitamins with carbohydrates and protein.
28	Vitamin-mineral interrelationship.
29	Vitamin toxicosis.
30	Critical vitamins for ruminants
31	Critical vitamins for non-ruminants.
32	Role of vitamins in reproduction, fertility and immunity.
	(4 Lectures)
33	Feed additives and nutraceuticals.
34	Probiotics, prebiotics, synbiotics; eubiotics
35	Feed enzymes. Phytochemical feed additives; polyphenols and essential oils.
36	Organic acids and acidifiers.
	al (16 Classes)
1	General principles of mineral estimation. Sampling and processing techniques.
2	Estimation of Ca
3	Estimation of P and salt.
4	Estimation of Mg and sulphur.
5	Estimation of Cu, Co and I.
6	Estimation of Zn, Mn, Mo, etc.
7	Determination of bioavailability of minerals.

8	Formulation of mineral mixtures for ruminants.
9	Formulation of mineral mixtures for non-ruminants and poultry.
10	Identification of adulterants and quality control.
11	Atomic absorption spectrometry in mineral estimation of major elements.
12	Atomic absorption spectrometry in mineral estimation of trace elements.
13	Preparation of diets for mineral studies.
14	Principles of vitamin estimation and formulation of vitamin mixtures.
15	Estimation of vitamins-A, E and C.
16	Purified diets for mineral studies.
17	Purified diets for vitamin studies.
18	Calculation of mineral and vitamin requirements.

Suggested Reading (ANN-603)

• McDonald P, Edwards RA, Greenhalgh JFD, Morgan CA, Sinclair LA and Wilkinson RG. 2011. *Animal Nutrition*, 7th ed. Benjamin Cummings.

• McDowell RL. 1989. Vitamins in Animal Nutrition. Academic Press.

• McDowell RL. 2003. Minerals in Animal and Human Nutrition, 2nd ed. Elsevier Science.

• Suttle NF. 2010. Mineral Nutrition of Livestock, 4th ed. CAB International.

Course Title: Feed and Fodder Technology

- I. Course Code : ANN 604
- **II.** Credit Hours : 1+1

Unit I (5 Lectures)	
	Various feed mill equipment and their handling; layout and operations in feed mill,
1	(small, medium and large feed plants)
2	Automated feed mill: merits and demerits.
3	Procurement of feed ingredients: specification and guidelines.
4	Quality control of feed ingredients BIS standard.
5	Quality control of finished feeds BIS standard.
Unit II (4 Lectures)
	Principles and process of material handling, weighing, grinding, mixing, pelleting,
6	packaging and other major processing operations.
7	Crumbling, flaking, popping and extrusion.
8	Preparation of Premixes.
9	Codex Alimentarius, HACCP.
	(5 Lectures)
10	Feed and fodder processing and preservation techniques.
11	Densification, chemical and biological treatment of feeds/ fodders.
12	Fodder conservation through silages
13	Microbiological evaluation of processed and preserved feeds
14	Effect of preservation on the nutritional value of feed.
Unit IV	(4 Lectures)
15	Feed storage and godown management; goods sanitation and hygiene of go-down.
16	Traditional and modern farm-level storage structures.
	Factors affecting feedstuffs during storage. Liquid feed ingredients. Storage losses,
17	insect pests and rodents control measures.
18	Mycotoxins in feedstuffs and its control measures.
Practica	l (18 Classes)
	Identification of feed ingredients and their specifications for different categories of
1	livestock and poultry.
2	Quality control and inspection of feed materials.
3	Qualitative tests for adulterants urea, urease, thiram.
4	Identification of insect pests and fungi in stored products.
5	Feed microscopy.
6	Formulation and preparation of premixes.
7	Quality evaluation of silage and hay, Laboratory preparation of silage.
8	Visit to feed plant
9	Hands-on training on preparation of feed
10	Hands-on training on preparation of mineral mixture
11	Introduction to pelletisers.
12	Introduction to complete feed block equipments
13	Plant layout and design of different capacity of feed mills
14	Problems related to feasibility of feed mills.

15	Experiential learning at the feed plant for preparing urea molasses mineral blocks.
16	Experiential learning at the feed plant for preparing mineral mixture.
1	Preparation of project report on plant layout, problems related to feasibility.
18	Record-keeping in different sections of a feed mill.

Suggested Reading (ANN-604)

• Dryden G. 2008. Animal Nutrition Science. CAB International.

- I. Course Title : Ruminant Nutrition
- II. Course Code : ANN 605
- **III.** Credit Hours : 2+1

	Theory
Unit I (5 I	Lectures)
1 Functional anatomy of the digestive system of ruminants.	

Nutrient requirements and feeding of heifer, dry and pregnant buffaloes Nutrient requirements and feeding of lactating buffaloes Nutrient requirements for lambs, dry, pregnant and lactating sheep Nutrient requirements for kids, dry, pregnant and lactating goat. Nutrition and feeding management of camels. Lectures) Voluntary feed intake. Determination of digestibility. Factors affecting digestibility. Manipulation of rumen fermentation. Lectures) Concept of complete feed, TMR and its advantages and disadvantages. Precision feeding. Phase feeding. Limiting nutrients for high yielding ruminants. Strategic feeding of high yielding ruminants. Strategic feeding of high yielding ruminants. Concept of by-pass nutrients and their impact on production, reproduction and immune status - 1 Concept of by-pass nutrients and their impact on production, reproduction and immune status - 2 Lectures) Nutritional approaches for increasing the functional properties of milk Role of CLA Role of omega fatty acids Different system of feeding buffalo for beef production - 1 Different system of feeding buffalo for beef production - 1 Feeding of animals during stress Feeding of animals during scarcity Feeding of animals during scarcity Feeding management of migratory/nomadic small ruminants	
Nutrient requirements and feeding of heifer, dry and pregnant buffaloes Nutrient requirements and feeding of lactating buffaloes Nutrient requirements for lambs, dry, pregnant and lactating sheep Nutrient requirements for kids, dry, pregnant and lactating goat. Nutrition and feeding management of camels. Lectures) Voluntary feed intake. Determination of digestibility. Factors affecting digestibility. Manipulation of rumen fermentation. Lectures) Concept of complete feed, TMR and its advantages and disadvantages. Precision feeding. Limiting nutrients for high yielding ruminants. Strategic feeding of high yielding ruminants Feeding during transition phase Concept of by-pass nutrients and their impact on production, reproduction and immune status - 2 Lectures) Nutritional approaches for increasing the functional properties of milk Role of CLA Role of omega fatty acids Different system of feeding buffalo for beef production - 1 Feeding of animals during stress Feeding of animals during stress Feeding of animals during scarcity	
Nutrient requirements and feeding of heifer, dry and pregnant buffaloes Nutrient requirements and feeding of lactating buffaloes Nutrient requirements for lambs, dry, pregnant and lactating sheep Nutrient requirements for kids, dry, pregnant and lactating goat. Nutrition and feeding management of camels. Lectures) Voluntary feed intake. Determination of digestibility. Factors affecting digestibility. Manipulation of rumen fermentation. Lectures) Concept of complete feed, TMR and its advantages and disadvantages. Precision feeding. Phase feeding. Limiting nutrients for high yielding ruminants. Strategic feeding of high yielding ruminants Feeding during transition phase Concept of by-pass nutrients and their impact on production, reproduction and immune status - 1 Concept of by-pass nutrients and their impact on production, reproduction and immune status - 2 Lectures) Nutritional approaches for increasing the functional properties of milk Role of CLA Role of omega fatty acids Different system of feeding buffalo for beef production - 1 Feeding of animals during stress Feeding of animals during natural calamities.	
Nutrient requirements and feeding of heifer, dry and pregnant buffaloes Nutrient requirements and feeding of lactating buffaloes Nutrient requirements for lambs, dry, pregnant and lactating sheep Nutrient requirements for kids, dry, pregnant and lactating goat. Nutrition and feeding management of camels. Lectures) Voluntary feed intake. Determination of digestibility, Factors affecting digestibility. Manipulation of rumen fermentation. Lectures) Concept of complete feed, TMR and its advantages and disadvantages. Precision feeding. Limiting nutrients for high yielding ruminants. Strategic feeding of high yielding ruminants Feeding during transition phase Concept of by-pass nutrients and their impact on production, reproduction and immune status - 1 Concept of by-pass nutrients and their impact on production, reproduction and immune status - 2 Lectures) Nutritional approaches for increasing the functional properties of milk Role of CLA Role of omega fatty acids Different system of feeding buffalo for beef production - 1 Feeding of animals during stress

Nutrient requirements and feeding of heifer, dry and pregnant buffaloesNutrient requirements and feeding of lactating buffaloesNutrient requirements for lambs, dry, pregnant and lactating sheepNutrient requirements for kids, dry, pregnant and lactating goat.	
Nutrient requirements and feeding of heifer, dry and pregnant buffaloesNutrient requirements and feeding of lactating buffaloesNutrient requirements for lambs, dry, pregnant and lactating sheep	
Nutrient requirements and feeding of heifer, dry and pregnant buffaloes Nutrient requirements and feeding of lactating buffaloes	
Nutrient requirements and feeding of heifer, dry and pregnant buffaloes	
9Nutrient requirements and feeding of heifer, dry and pregnant cows10Nutrient requirements and feeding of lactating cows	
Nutrient requirements and feeding of heifer, dry and pregnant cows	
Role of milk replacer, calf starter and preparation of milk replacers.	
Nutrient requirements and feeding of calves	
Role and requirement of Water in ruminants.	
Lectures)	
Feeds and fodders for ruminant	
Degradation of various nutrients in rumen	
Development of rumen and classification of rumen bacteria, protozoa and fungi	
)	

Design and planning of feeding experiments- RBD.
Design and planning of feeding experiments- LSD.
Design and planning of feeding experiments- Factorial methods.
Identification of feed and fodder based on its composition.
Ration formulation for cattle for different physiological stages.
Ration formulation for buffalo for different physiological stages
Ration formulation for sheep for different physiological stages
Ration formulation for goats for different physiological stages
Estimation of digestibility and nutritive value of feeds and fodders by metabolism
trial in dairy cattle.
Determination of nutritive value of pastures by the use of range techniques.
Collection and processing of rumen liquor.
Estimation of rumen metabolic profile (pH, etc.)
Estimation of rumen metabolic profile (ammonia etc.)
Estimation of rumen metabolic profile (lactate)
Estimation of rumen metabolic profile (TVFA)
Artificial rumen technique
Estimation of purine derivatives.

Course Title: Non-Ruminant Nutrition

- I. Course Code : ANN 606
- II. Credit Hours : 2+1

Theory		
Unit I (19	Unit I (19 Lectures)	
1	Feeding of poultry for meat production 1	

2 Feeding of poultry for meat production 2	
3 Feeding of poultry for egg production 1	
4 Feeding of poultry for egg production 2	
5 Ideal protein concept	
6 Standard ileal digestible amino acids.	
7 Nutrient requirements for broilers.	
8 Nutrient requirements for layers.	
9 Feeding of breeder hens.	
10 Nutritional factors affecting hatchability	
11 Feeding systems for poultry.	
12 Feeding of backyard poultry	
13 Feed additives for poultry.	
14 Nutritional approaches for designer egg	
15 Nutritional approaches for designer meat production.	
16 Nutritional disorders in poultry 1	
17 Nutritional disorders in poultry 2	
18 The role of nutrition in diseases prevention	
19 Water intake and quality in poultry production.	
Unit II 6 Lectures)	
20 Nutrition and feeding of swine in different stages of g	growth.
21 Nutrition and feeding of swine for production.	
22 Feeding of piglets	
23 Nutritional factors affecting the quality of the product	ts,
24 Lean meat production.	
25 Water intake and quality in pig production.	
Unit III (11 Lectures)	
26 Feeding of equines 1	
27 Feeding of equines 2	
28 Feeding of rabbits.	
29 Hindgut fermentation and its importance.	
30 Nutrient requirements of equines.	
31 Special features of equine feeding management.	
32 Nutritional management of colic.	
33 Nutritional management of other health disorders in h	norses
34 Nutrient requirements of rabbits for wool production.	
35 Nutrient requirements of rabbits for meat production.	
36 Nutrition-related disorders in rabbits.	
Practical (18 Classes)	
1 Design and planning for feeding experiments in swine	e.
2 Design and planning for feeding experiments in layer	
3 Design and planning for feeding experiments in broil	
4 Calculation of nutrient requirements for broilers.	

5	Calculation of nutrient requirements for layers.
6	Formulation and compounding of general and least cost ration for broilers
7	Formulation and compounding of general and least cost ration for layers
8	Formulation and compounding of general and least-cost rations for swine
9	Calculation of different measures of protein quality 1
10	Calculation of different measures of protein quality 2
11	Determination of the nutritive value of poultry feeds by balance experiments.
12	Determination of the nutritive value of swine feeds by balance experiments.
13	Formulation of rations for horses.
14	Formulation of rations for rabbits.
15	Visit to layer farm.
16	Visit to broiler farm.
17	Visit piggery unit
18	Visit to feed and fodder stores.

Course Title: Research Methodology in Animal Nutrition

- I. Course Code : ANN 607
- II. Credit Hours : 0+2

	Practical Unit I (7 Practical)	
1	Principles of animal experimentation	
2	Feeding experiments in Animal Nutrition, advantages and disadvantages (Comparative	
	feeding trials)	
3	Feeding trials with laboratory animals, Purified diet method	
4	Feeding experiments in Animal Nutrition, advantages and disadvantages (Germ free	
	technique, Group Vs Individual feeding, Controlled Vs Ad lib Feeding)	

or paired feeding, slaughter experiments, advantages and disadvantages (Equalities paired) or paired feeding, slaughter experiments) 6 Designs of experiments applied in Animal Nutrition Research. Unit II (20 Practical) 8 Preparation of standard solutions. Preparation of percent solutions 9 Preparation of Mormal Solutions acids and alkalis 10 Preparation of Molar Solutions acids and alkalis 11 Proximate analysis of feeds and fodders - Moisture Estimation 12 Proximate analysis of feeds and fodders - Crude Protein Estimation 13 Proximate analysis of feeds and fodders - Crude Protein Estimation 14 Proximate analysis of feeds and fodders - Crude Fibre Estimation 15 Proximate analysis of feeds and fodders - Sub estimation 16 Cellwall partitioning using Van Soest methods - NDF Estimation 17 Cellwall partitioning using Van Soest methods - Lignin Estimation 18 Cell wall partitioning using Van Soest methods - Lignin Estimation 21 <i>In-vitro</i> determination of digestibility and digestion kinetics 22 In sacco determination of digestibility and digestion kinetics 23 Determination of energy content of faces using bomb calorimeter 24 Determination of energy co	5	Feeding experiments in Animal Nutrition, advantages and disadvantages (Equalized paired
6 Designs of experiments applied in Animal Nutrition Research 7 Common statistical tools for nutritional research. Unit II (20 Practical) ************************************	5	
7 Common statistical tools for nutritional research. Unit II (20 Practical) 8 Preparation of standard solutions. - I. Course Title : Companion Animal Nutrition
- II. Course Code : ANN 608
- III. Credit Hours : 1+0

	Theory		
Unit I (6	6 Lectures)		
1	Philosophy of companion animal nutrition (dogs & cat)		
2	Feeding habits and food pattern of companion animals (dogs & cat)		
3	Digestion and absorption of nutrients in dogs and cats.		
4	Nutrient requirements for dogs during different life stages: energy, protein, fat, minerals		
	and vitamins.		
5	Nutrient requirements for cats during different life stages: energy, protein, fat, minerals		
	and vitamins.		
6	Critical nutrients for cats.		
Unit II (4 Lectures)		
7	Common feed ingredients and supplements for pets.		
8	Homemade diets. Commercial pet foods: types and nutritional profile.		
9	Processing techniques in pet food manufacturing. Nutraceuticals in pet foods		
10	Pet food evaluation and quality control.		
Unit III	(4 Lectures)		
11	Feeding standards for companion animals (AAFCO)		
12	Feeding management for dogs and cats of different age groups, viz., pregnancy, lactation,		
	neonatal puppies and kitten, growth, adult maintenance		
13	Feeding management for dogs and cats during stress and geriatrics including feeding		
	behaviour.		
14	Water requirements of dogs and cats		
Unit IV	(4 Lectures)		
15	Deficiencies and excesses of nutrients.		
16	Nutritionally responsive disorders: inherited disorders of nutrient metabolism, diabetes		
	mellitus, obesity, urinary tract health and kidney diseases.		
17	Importance of colostrum and feeding of neonates and growing animals. Raising orphans		
18	Parenteral nutrition for hospitalized pets. (Artificial feeding and feeding during emergency,		
	Feeding and care of nursing mothers, Feeding of sick animals, Post - surgical nutrition		
	Geriatric animal nutrition.

- I. Course Title : Nutrition of Laboratory, Wild and Zoo Animals
- II. Course Code : ANN 609
- III. Credit Hours : 2+1

Theory		

Unit I (13	Lectures)
1.	Digestive structure and functions of laboratory animals rats
2.	Digestive structure and functions of laboratory animals mice
3.	Digestive structure and functions of laboratory animals Guinea pigs
4.	Nutrient requirement of rats.
5.	Nutrient requirement of mice.
6.	Nutrient requirement of Guinea pigs.
7.	Feeding of rats.
8.	Feeding of mice.
9.	Feeding of Guinea pigs.
10.	Concept of purified diets for rats
11	Concept of purified diets for mice.
12	Concept of purified diets for Guinea pigs.
13	Nutrition of non - human primates.
Unit II (1) Lectures)
14	Natural dietary habits of zoo carnivores 1
15	Natural dietary habits of zoo carnivores 2
16	Natural dietary habits of zoo herbivores 1
17	Natural dietary habits of zoo herbivores 2
18	Feeding schedule of various classes of captive and zoo carnivores.
19	Feeding schedule of various classes of captive and zoo herbivores.
20	Feeding schedule of various classes of captive and zoo birds.
21	Feeding orphan and neonates.
22	Role of nutrition in the management of health disorders in zoo carnivores.
23	Role of nutrition in the management of health disorders in zoo herbivores.
24	Feeding of sick animals.
25	Feeding of old animals.
26	Parenteral nutrition.
Unit III (1	0 Lectures)
27.	Feeding habits, and behaviour of wild carnivores.
28.	Feeding habits, and behaviour of wild herbivores.
29.	General aspects of digestive physiology of ruminant herbivores.
30.	General aspects of digestive physiology of non- ruminant herbivores.
31	General aspects of digestive physiology of carnivores.
32	Nutrition of mithun.
33	Nutrition of yak.
34	Nutritive characteristics of forages for wild animals.
35	Adequacy of forage plants for wild animals.
36	Adequacy of forage plants for zoo animals.
	Practical
1.	Formulation of balanced diets for rats.

2.	Formulation of balanced diets for mice.
3.	Formulation of balanced diets for Guinea pigs.
4.	Preparation of hygienic, balanced diets and feeding of rats.
5.	Preparation of hygienic, balanced diets and feeding of mice.
6.	Preparation of hygienic, balanced diets and feeding of Guinea pigs.
7.	Characteristics of ration formulation for wild and zoo carnivores.
8.	Characteristics of ration formulation for wild and zoo ruminant herbivores.
9.	Characteristics of ration formulation for wild and zoo non ruminant herbivores.
10.	Feeding schedules of wild and zoo carnivores.
11.	Feeding schedules of wild and zoo ruminant herbivores.
12.	Feeding schedules of wild and zoo non ruminant herbivores.
13.	Visit to zoological parks and wild life sanctuary.
14.	Visit to zoological wild life sanctuary.
15.	Collection of information on the feeding schedule of different categories of captive
	herbivores 1
16	Collection of information on the feeding schedule of different categories of captive
	herbivores 2
17	Collection of information on the feeding schedule of different categories of captive
	carnivores 1
18	Collection of information on the feeding schedule of different categories of captive
	carnivores 2

Course Title: Non-Conventional Feed Resources

- I. Course Code : ANN 610
- II. Credit Hours : 1+1

Theory		
Unit I (8 L		
1.	Present and future feed requirements and current availability for livestock and poultry.	
2.	Use of non-conventional feeds- byproducts of agriculture.	
3.	Use of non-conventional feeds- byproducts of agro-industries.	
4.	Use of non-conventional feeds- byproducts of food processing units.	
5.	Use of non-conventional feeds- byproducts from forest.	
6.	Use of non-conventional feeds- byproducts of slaughter house and aquatic weeds.	
7.	Permissible levels of inclusion of various non-conventional feeds in the ration of	
	different kinds of livestock.	
8.	Formulation of economical rations using the non-conventional feed.	
Unit II (6 I		
9.	Classification of toxic principles in animal feed-stuffs.	
10.	Chemico-physical properties of various anti-nutritional factors (ANFs) 1	
11.	Chemico-physical properties of various anti-nutritional factors (ANFs) 2	
12.	Rumen microbial adaptation to various ANFs.	
13.	Effect of anti-nutritional factors on health and production in livestock.	
14	Effect of anti-nutritional factors on health and production in poultry.	
Unit III (4		
15	Detoxification of toxic principles by various physical, chemical and biological	
16	techniques 1 Detoxification of toxic principles by various physical, chemical and biological	
10	techniques 2	
17	Insecticide and pesticide residues in feeds andfodders.	
18	Heavy metal residues in feeds and fodders.	
Practical		
1	Qualitative methods for the presence/ detection of ANFs in feed-stuffs 1	
2	Qualitative methods for the presence/ detection of ANFs in feed-stuffs 2	
3	Estimation of mycotoxin (aflatoxin) in various feeds and fodders	
4	Estimation of mycotoxin (ochratoxin) in various feeds and fodders	
5	Estimation of nitrates in feed.	
6	Estimation of HCN in feed.	
7	Estimation of oxalates in feed 1	
8	Estimation of oxalates in feed 2	
9	Estimation of protease inhibitors in feed.	
10	Estimation of tannins (spectrophotometer method) in feed.	
11	Estimation of tanins (volumetric method) in feed	
12	Estimation of saponins in feed.	
13	Estimation of gossypol in feed.	
14	Estimation of mimosine in feed.	

15	Estimation of lead in feed.
16	Estimation of mercury in feed.
17	Estimation cadmium in feed.
18	Estimation of arsenic in feed.

Course Title: Rumen Biotechnology

- I. Course Code : ANN 612
- II. Credit Hours : 1+0

Theory		
Unit I (9 Lectures)		
1	Rumen ecology.	
	Manipulation of rumen fermentation for better utilization of fibrous feeds and	
2	reduction in methane production 1	
3	Manipulation of rumen fermentation for better utilization of fibrous feeds and reduction in methane production 2	
4	Biotechnological applications for lignin degradation.	
5	Defaunation	
6	Types of feed additives, advantages of use of feed additives in ruminants	
7	Role of feed additives, chemicals, antibiotics and probiotics and their effect on rumen metabolism.	
8	Role of feed additives, chemicals, antibiotics and probiotics and their effect on rumen metabolism.	
9	Degradation of anti-nutritional factors in the rumen.	
Unit II (9	Lectures)	
10	Genetic manipulation for improvement in rumen fermentation.	
11	DNA extraction and quantification	
12	DNA recombinant technology for improvement in rumen fermentation.	
13	Factors influencing the fate of introduced microbes.	
14	Nutrigenomics	
15	Metagenomics for microbial diversity: concept	
16	Metagenomics for microbial diversity: application.	
17	Culturing rumen microbes 1	
18	Culturing rumen microbes 2

Course Code: ANN 701

Course Title: Modern Concepts in Feeding of Ruminants Credit Hours: 2+0

Sr. No.	Credit Hours: 2+0 Topics
Unit-1	20 Lectures
1	Developments in ruminant digestive physiology.
2	Advanced concepts in the determination of energy requirements.
3	Advanced concepts in the determination of protein requirements.
4	Importance of energy for milk production
5	Importance of energy for meat production
6	Importance of protein quality for milk production
7	Importance of protein quality for meat production
8	Recent concepts in protein and energy systems- CNCPS
9	Recent concepts in net energy
10	Recent concepts in metabolizable and available protein.
11	Methods of estimation of energy values of feeds for maintenance and growth in livestock.
12	Methods of estimation of energy values of feeds for reproduction in livestock.
13	Methods of estimation of energy values of feeds for lactation in livestock.
14	Methods of estimation of protein values of feeds for maintenance and growth in livestock.
15	Methods of estimation of protein values of feeds for reproduction in livestock.
16	Methods of estimation of protein values of feeds for lactation in livestock.
17	Kinetics of nutrient metabolism.
18	Hindgut fermentation.
19	Efficiency of nutrient utilization for different production purposes.
20	Hormonal regulation of nutrient partitioning.
Unit-2	16 Lectures
21	Concept of limiting amino acids for high yielders.
22	Concept of limiting amino acids for high yielders.
23	Strategic feeding of high yielding dairy cows
24	Strategic feeding of high yielding dairy cows
25	Strategic feeding of meat-producing ruminants.
26	Concept of phase feeding
27	Concept of phase feeding
28	Concept of precision feeding
29	Feeding during the transition period.
30	Feeding during the transition period.
31	Bypass nutrient technology.

32	Bypass nutrient technology.
33	Rumen manipulation to optimize productivity
34	Rumen manipulation to optimize productivity
35	Rumen manipulation to reduce methanogenesis.
36	Rumen manipulation to reduce methanogenesis.

Course Code: ANN 702 Course Title: Forages in Animal Nutrition Credit Hours: 1+0

Sr. No.	Topics
Unit I	10 Lectures
1	Forages in ruminant production.
2	Improvement in productivity of fodders and pasture feed-food crops,:
3	Improvement in productivity of silvi-pasture, horti-pasture, shrubs.
4	Use of conserved forages in ruminant feeding.
5	Factors affecting the nutritive value of cultivated and conserved forages
6	Hydroponics as an alternate to green fodder production.
7	Top feeds, fodder trees and their effective utilization.

8	Tree leaves as a source of condensed tannins:
9	Role of condensed tannins in tree leaves in protein protection
10	Role of condensed tannins in tree leaves in GI parasite control.
Unit II	8 Lectures
11	Methods in forage evaluation:
12	Methods in forage evaluation:
13	Method of calculation of in-vitro DOMD
14	Calculation of ME by using in-vitro gas production technique.
15	Calculation of ME by using in-vitro gas production technique.
16	Pasture consumption method
17	Pasture evaluation studies.
18	Pasture evaluation studies.

Course Code: ANN 703 Course Title: Recent Concepts in Feeding of Non-Ruminants Credit Hours: 1+0

Sr. No.	Topics
Unit I	(10 Lectures)
1	Latest concepts in nutrition and feeding in different phases of broilers
2	Latest concepts in nutrition and feeding in different phases of layers
3	Latest concepts in nutrition and feeding in different phases of breeder stock
4	Developments in-ovo nutrition and Recent developments in early chick nutrition
5	Nutritional disorders in modern poultry production and their amelioration.
6	Nutritional factors affecting egg quality and hatchability in poultry
7	Feeding strategies for the production of designer eggs and significance of omega fatty acids
8	Feeding strategies for the production of designer eggs and significance of omega fatty acids
9	Recent trends in amino acid nutrition in poultry
10	Advances in new generation feed additives.

Unit II	(8 Lectures)
11	Nutrition and feeding of piglets.
12	Nutrition and feeding of grower, finisher pigs and pigs for breeding
13	Nutrition and feeding of pregnant and lactating sows
14	Modern concepts in amino acids nutrition in swine production.
15	Emerging concepts in feed and feed additive for pigs.
16	Role of vitamins and minerals in health and disease.
17	Role of vitamins and minerals in health and disease.
18	Nutritional manipulation for lean meat and designer pork production, Carcass modifiers

Sr. No.	Lectures
Unit-1	9 Lectures
1	Rumen development.
2	Rumen microflora: classification
3	Role of rumen microflora in fermentation and digestion, microbial interactions,
4	Rumen kinetics,(Contd)
5	Rumen kinetics,
6	Nutrient requirement of rumen microbes.
7	Dynamics of nitrogen metabolism in the rumen(Contd)
8	Dynamics of nitrogen metabolism in the rumen
9	Dynamics of nitrogen metabolism in the rumen
Unit-2	9 Lectures
10	Manipulation of rumen fermentation: physical approach
11	Manipulation of rumen fermentation: chemical approach
12	Manipulation of rumen fermentation: biological approach
13	Trans-faunation
14	Defaunation.
15	Concept of metagenomics in rumen manipulation.
16	Green-house gas production from rumen
17	Methane mitigation strategies
18	Methane mitigation strategies
Practical	18 Classes
1	Measurement of rumen microbial count.
2	Measurement of rumen protozoal count
3	Determination TVFA by chromatography.(Contd)
4	Determination TVFA by chromatography
5	Estimation of ammonia in rumen liquor.
6	Estimation of rumen microbial protein
7	Study on protection of protein by physical means in relation to degradability. (Contd)
8	Study on protection of protein by physical means in relation to degradability
9	Study on protection of protein by chemical means in relation to degradability. (Contd)
10	Study on protection of protein by chemical means in relation to degradability
	Estimation of rumen fermentation products-TVFA by artificial rumen techniques
11	(Contd) Exactionation of ruman Valatila Fatty Asida
12	Fractionation of ruman formantation products. Ammonia by artificial ruman techniques
13	Estimation of rumen fermentation products- Ammonia by artificial rumen techniques. (Contd)
13	Estimation of rumen fermentation products- Ammonia by artificial rumen techniques
15	Estimation of rumen fermentation products- Ammonia by artificial rumen techniques
	Rumen enzyme assay.

Course Code: ANN 704 Course Title: Advances in Rumen Metabolism Credit Hours: 1+1

17	Rumen enzyme assay.

Course Code: ANN 705 Course Title: Advances in Mineral and Vitamin Nutrition Credit Hours: 2+0

Sr. No.	Topics
Unit I	18 Lectures

1	Role of minerals in nutrient metabolism.
	Absorption, transport, metabolism and regulation of various macrominerals in animal
2	body
3	Absorption, transport, metabolism and regulation of various macrominerals in animal
3	body Absorption, transport, metabolism and regulation of various microminerals in animal
4	body
	Absorption, transport, metabolism and regulation of various microminerals in animal
5	body
6	Bio-availability of macro and micro minerals
7	factors affecting the bioavailability of minerals
8	Bio-markers for mineral status.
9	Mineral interactions.
10	Dietary cation-anion difference (DCAD).
10	Identification and correction of deficiencies and toxicities of minerals.
11	Mineral tolerance in animals.
12	Mineral requirements for growth
13	Mineral requirements for reproduction
14	Mineral requirements for lactation
15	Mineral toxicities concerning livestock feeding
10	Amelioration of mineral toxicities in livestock
17	Methods of mineral supplementation.
Unit II	18 Lectures
1	Chemical nature of fat-soluble vitamins
2	Chemical nature of water-soluble vitamins.
3	Role of vitamins in nutrient metabolism.
4	Advances in physiological functions and metabolism of vitamins
5	Fat soluble vitamin deficiencies, clinical signs and their management
6	Fat soluble vitamin deficiencies, clinical signs and their management
7	Water soluble vitamin deficiencies, clinical signs and their management
8	Water soluble vitamin deficiencies, clinical signs and their management
9	Water soluble vitamin deficiencies, clinical signs and their management
10	Antimetabolites to vitamins
11	Hypervitaminosis.
12	Vitamins as antioxidants.
13	Role of vitamins in immunity
14	Role of vitamins in stress
15	Dietary supplementation of water soluble vitamins: forms, storage and stability
16	Dietary supplementation of water soluble vitamins: forms, storage and stability
17	Dietary supplementation of fat soluble vitamins: forms, storage and stability
	Dietary supprementation of har solution vitalities, storage and statistics

Sr. No.	Credit Hours: 1+1 Topics
Unit-1	7- Lectures
1	Metabolic disorders in farm animals.
2	Metabolic disorders in farm animals.
3	Modern concepts in the metabolic alterations in milk fever
4	Modern concepts in the metabolic alterations in ketosis
5	Modern concepts in the metabolic alterations in downers cow syndrome, retained placenta, sub-acute ruminal acidosis and laminitis
6	Modern concepts in the metabolic alterations in abomasal displacement, mastitis
7	Optimum nutrition for peri-parturient dairy animals.
Unit-2	6 Lectures
8	Metabolic effects of infection: metabolism of carbohydrates, fats, proteins
9	Metabolic effects of infection: amino acids and minerals during various infection and inflammatory diseases.
10	Role of cytokines in nutrient homeorrhesis and Nutrition-immunity interaction
11	Role of nutrients fats and amino acids in the immune response.
12	Role of nutrients minerals and vitamins in the immune response.
13	Metabolic alterations during abiotic stress and Feeding management during stress situations
Unit-3	5 Lectures
14	Nutritional manipulation and feeding of sick and hospitalized animals.
15	Preventive and therapeutic nutrition.
16	Optimum nutrition for the management of diseases of the hepatic, renal and gastrointestinal system.
17	Convalescence diet and Feeding, management of pre- and post-operated animals.
18	Nutritional intervention in skin and cardiac disorders
Practical	16 Classes
1	Assessment of immunity by humoral immune response
2	Assessment of immunity by humoral immune response (continued)
3	Assessment of immunity by cell mediated immune response
4	Assessment of immunity by cell mediated immune response (continued)
5	Assessment of antioxidant status by estimation of Superoxide dismutase
6	Assessment of antioxidant status by estimation of Superoxide dismutase (continued)
7	Assessment of antioxidant status by estimation of Catalase
8	Assessment of antioxidant status by estimation of Catalase (continued)
9	Assessment of antioxidant status by estimation of Glutathione peroxidase
10	Assessment of antioxidant status by estimation of Glutathione peroxidase (continued)

Course Code: ANN 706 Course Title: Advanced Clinical Nutrition Credit Hours: 1+1

11	Assessment of antioxidant status by estimation of reduced glutathione (GSH)
12	Assessment of antioxidant status by estimation of reduced glutathione (GSH) cont
13	Assessment of antioxidant status by estimation of lipid peroxides.
14	Assessment of antioxidant status by estimation of lipid peroxides. (continued)
15	Assessment of antioxidant status by estimation of lipid peroxides. (continued)
16	Formulation of diet for sick and diseased animals.
17	Formulation of diet for sick and diseased animals. (continued)
18	Formulation of diet for sick and diseased animals. (continued)

17	Analysis of feeds and fodders using NIR. (continued)
18	Faecal inoculumas an alternative to rumen liquor for in-vitro studies.
Practical	18 Classes
1	Invitro digestibility determination using RUSITEC
2	Invitro digestibility determination using Tilley and Terry method
3	Sampling of feed and fodder sample for mineral estimation
4	Digestion and preparation of mineral aliquot for mineral estimation using AAS
5	Estimation of macro-minerals by atomic absorption spectrophotometer.
6	Estimation of micro-minerals by atomic absorption spectrophotometer.
7	Estimation of aflatoxins by HPLC
8	Estimation of aflatoxins by thin layer chromatography method
9	Estimation of ocharotoxins
10	Estimation of oxalate
11	Estimation of oxalate cont
12	Estimation of nitrates
13	Estimation of tannin.
14	Estimation of volatile fatty acid
15	Estimation of volatile fatty acid cont
16	Estimation of mimosine
17	Estimation of vitamins-A
18	Estimation of vitamin-C.

Sr. No.	Topics
Unit-1	10 Lectures
1	Good manufacturer practices (GMP) in feed plants.
2	Planning and designing of feed plants of different capacities.
	Recent developments in feed processing: particle size reduction, pelleting, extrusion,
3	expanding, conditioning, micronizing

Course Code: ANN 708 Course Title: Advances in Feed Technology Credit Hours: 1+0

4	Post pelleting applications. Automation in feed processing.
5	Flow charts for preparation of feeds for various species
6	Mixer efficiency test, pellet durability test.
7	Densification of bulk feeds.
8	Densification of bulk feeds cont
9	Silos of various capacity, silage preparation and silage additives.
10	Laws and regulations of the feed manufacturing industry, Introduction to labour laws and standards,
11	Planning and production programme, Record-keeping.
Unit-2	07 Lectures
12	Roughage processing, Whole plant processing.
12 13	Roughage processing, Whole plant processing.Solid-state fermentation technology.
13	Solid-state fermentation technology.
13 14	Solid-state fermentation technology.Preparation of complete feeds and its processing.
13 14 15	Solid-state fermentation technology.Preparation of complete feeds and its processing.Formulation of premixes. Carriers and diluents. Liquid feed handling.
13 14 15 16	Solid-state fermentation technology.Preparation of complete feeds and its processing.Formulation of premixes. Carriers and diluents. Liquid feed handling.Formulation of premixes. Carriers and diluents. Liquid feed handling cont

Course Code: ANN 709 Course Title: Toxicants and Anti-Metabolites in Animal Nutrition Credit Hours: 1+0

Sr. No.	Topics
Unit-1	14 Lectures
1	Classification of toxicants in animal feeds.
2	Plant origin toxicants, and their effects on animal health and production. (Conti)
3	Plant origin toxicants, and their effects on animal health and production.
4	Microbial origin toxicants and their effects on animal health and production.
5	Microbial origin toxicants and their effects on animal health and production.
6	Acquired toxicants (heavy metals) and their effects on animal health and production. (Conti)
7	Acquired toxicants (heavy metals) and their effects on animal health and production.
8	Acquired toxicants (pesticide residues) and their effects on animal health and production. (Conti)
9	Acquired toxicants (pesticide residues) and their effects on animal health and production.
10	Acquired toxicants (drug residues) and their effects on animal health and production.
11	Ameliorative measures.
12	Detoxification of plant origin toxicants

13	Residual effects on animal products and the environment.
14	Residual effects on animal products and the environment.
Unit-2	4 Lectures
15	Anti-metabolites in animal feedstuffs.
16	Effects of anti-metabolites on animal health
17	Effects of anti-metabolites on production and reproduction
18	Anti-vitamins and their occurrence in feedstuffs

	ANN 710 (1+0)
Sr No.	Topics
Unit 1	4 Lectures
1	Basic concepts of genetics
2	Basic concepts of molecular biology.
3	Nucleic acid structure and replication.
4	Transcription and translation.
Unit 2	8 Lectures
5	Introduction to nutrigenomics
6	Significance of nutrigenomics in animal nutrition
7	Introduction to nutrigenetics.
8	Nutritional regulation of gene expression.
9	Nutritional regulation of gene expression.
10	Introduction to epigenetics
11	Influence of epigenetics on early life nutrition
12	Influence of epigenetics on health

Course Code: ANN 710 Course Title: Nutrigenomics in Animal Nutrition Credit Hours: 1+0

Unit 3	4 Lectures
13	Concepts of proteomics
14	Concepts of proteomics
15	Concepts of metabolomics.
16	Microbiome and diseases of nutritional importance.
17	Microbiome and diseases of nutritional importance.
18	Dietary influences on the microbiome.

Course Code : ANN 711 Course Title : Equine Nutrition Credit Hours : 1+0

	ANN 711 (1+0)
Unit I	8 Lectures
1	Digestive function and metabolism of nutrients.
2	Nutrient requirements of foals
3	Nutrient requirements of yearlings
4	Nutrient requirements of mare and stallions
5	Nutrient requirements of pregnant mare
6	Nutrient requirements of lactating mare
7	Feed ingredient for horses.
8	Digestive disorders.
9	Digestive disorders.
Unit II	8 Lectures
10	Feeding of foal
11	Feeding of yearlings
12	Feeding of mares and stallions for production and reproduction
13	Feeding for performance and nutrient metabolism during exercise.
14	Nutritional management of race-horses
15	Diet formulation for foals & yearlings

16	Diet formulation for race horses
17	Nutritional disorders, prevention and remedial measures
18	Nutritional disorders, prevention and remedial measures
